INDEX.

Agassiz, Professor, on the glacial theory and its recent progress, 217.
——— Professor, his theory of glaciers, examined by Professor Bronn, 36.
——— Professor, on the succession and development of organised beings on the globe, 388.
——— his recent observations on the glacier of the Aar, 399.
Air-passages, their ultimate distribution, and the mode of formation of the air-cells of the lungs, by William Addison, F.L.S., &c., 207.
Alps, geological structure of, by M. Studer of Berne, 144.
Arago, M., on Nebulæ, 307.
——— on the Milky Way, 326.
Asbestus of Scharzenstein, in the Ziller Thal in the Tyrol, its composition, 203.

Barry, Martin, Dr, his additional observations on fibre, 192.
Borneo, on the occurrence of platina and diamonds there, 284.
Bowerbank, J. S., Esq., on the organic tissues in the bony structure of Corallidæ, 206.
British fossil reptiles, account of, by Professor Owen, 65.
Bronn, Professor, on some geological and physical considerations connected with certain portions of the glacier theory of M. Agassiz, 36.
Bryson, Mr R., on a new method of illuminating church clocks, 293.
Buchanan, George, Esq., civil engineer, his description and uses of his protracting table, 140.
Bude-light, report on the, by Andrew Ure, M.D., 91.

Charpentier, Jean de, on glaciers, and the erratic formation of the Rhone, 104.
Climate of Egypt, remarks on, by Joseph Russegger, Austrian councillor of mines, 93.
Coal and coke, their comparative evaporative power, by Dr Fyfe, 31.
Copper, native, in North America, its geognostic position, 201.

Corallidæ, the organic tissues in their bony structure, by J. S. Bowerbank, Esq. 206.
Crater, Great, of the Volcano in Hawaii, 202.
Crustacea, six new species of, described, by Henry Goodsir, Esq., 174.
Crustaceous animals, new species of, described, by Henry Goodsir, Esq., 363.

Dalmahoy, James, Esq., on the cause of the diminution of the fall of rain as the height above the ground increases, 10.
Darwin, Charles, Esq., on the ancient glaciers of Caernarvonshire, 352.
Diamonds, their occurrence in Borneo, 284.
Diorama, portable, by George Tait, Esq. advocate, 64.

Egypt, its climate, considered by M. Joseph Russegger, Austrian Councillor of Mines, 93.
Egg, the metamorphoses of the, in the Caligus, Carcinus, and Pagurus, by H. D. S. Goodsir, Esq., 174.
Embryology, extracts from Professor Valentin's report on, 368.
Earthquake shocks, notices of, by D. Milne, Esq., 372.
Erratic formation of the basin of the Rhone, by J. de Charpentier, 104.

Fibre, additional observations on, by Dr Martin Barry, 192.
Foraminifera, fossil, in the green sand of New Jersey, America, noticed, 205.
Forbes, Professor, account of his recent observations on Glaciers, 338.
Fyfe, Dr, on the comparative evaporative power of coal and of coke, 31.
——— on the prevention of smoke and economy of fuel by the use of steam, in the patent process of Ivison, 51.

Geological meeting at Aix, 204.
——-—— structure of the Alps, by M. Studer of Berne, 144.
Geognostical position of the numerous masses of native copper in North America, 201.
Geokronite, a new species of mineral described, 204.
Glacial theory, the, by Professor Agassiz, 217.
——————— account of the, by R. I. Murchison, Esq., 124.
Glacier of the Aar, Professor Agassiz on the, 399.
Glaciers, recent observations on, by Professor Forbes, 338.
——— ancient, of Caernarvonshire, notes on them, by Charles Darwin, Esq., 352.

Glaciers, theory of their formation, by Sir G. S. Mackenzie, F.R.S.L. & Ed., 1.
——— Essay on, by J. de Charpentier, 104.
——— observations on, by Professor Bronn, 36.
Gold crystallized, account of, 203.
Goodsir, Henry, Esq., his description of six new species of crustacea, &c., 174.
——— on some new crustaceous animals found in the Firth of Forth, 363.
Goodsir, John, Esq., M.W.S., on the structure of the intestinal villi in man, and certain of the mammalia, with some observations on digestion, and the absorption of chyle, 165.
Gray, Lord, his meteorological table for 1841, 195.

Hawaii, its great crater described, 202.
Hopkins, Mr, on the influence of mountains on temperature in the winter in certain parts of the northern hemisphere, 88.
Hood, Charles, Esq., on some peculiar changes in iron, 286.

Illuminating church clocks, a new method of, by Mr Bryson, 293.

Jamesonite, new localities of, 203.

Mackenzie, Sir George, his hypothesis to account for the origin of glaciers, 1.
Meteorological table, 195.
Milky Way, on the, by M. Arago, 326.
Milne, David, Esq., his notices of earthquake shocks, 372.
Molcules, on a re-arrangement of, in a body after solidification, by R. Warington, Esq., 292.
Morton, S. G., M.D., his remarks on the ancient Peruvians, 335.
Mountains, influence of, on temperature, by Mr Hopkins, 88.
Murchison, R. I., Esq., on the glacial theory, 124.

Nebulæ, on, by M. Arago, 307.

Owen, Professor, on British fossil reptiles, 65.

Patents, list of new, 211, 414.
Paving streets, improvement in, 208.
Persia, on the mechanical arts of, by James Robertson, Esq., 296.
Peruvians, ancient, remarks on them, by Dr Morton, 335.

XUM

Platina, its occurrence in Borneo, 284.
Protracting table, Mr Buchanan's, 140.

Publications, new, 210.

Rain, on the diminution of, as the height above the ground increases, by James Dalmahoy, Esq., 10.
Rain-gauges, on the imperfections of, by T. Stevenson, Esq., 12.
Reptiles, fossil, of Britain, account of, by Professor Owen, 65.
Robertson, James, Esq., on the mechanical arts of Persia, 296.
Russegger, Joseph, Austrian councillor of Mines, his remarks on the climate of Egypt, 93.

Sands, sounding, account of, 204.
Schwann, M., on the conformity of structure and growth in animals and plants, 21.
Silk-worms, 207.
Smoke, on the prevention of, by Dr Fyfe, 51.
Snail-trade of Ulm, 207.
Society, Wernerian, its proceedings, 197.
——— Royal Scottish, of Arts, 199, 403.
——— Royal of Edinburgh, its proceedings, 196.
Stevenson, Thomas, Esq., on the defects of rain gauges, 12.
Stratification, fan-shaped, account of, 200.
Studer, M., on the geological structure of the Alps, 144.
Swainson's library, recovery of, by Mr Maclear and Rev. Dr Adamson, 208.

Tait, George, Esq., advocate, on producing the effect of a fog in a portable diorama, 64.
Time, eastern mode of measuring, 209.
Travelling, speed of, 208.

Ure, Andrew, M. D., on the Bude-light, 91.

Valentin, Professor, extracts from his report on embryology, 368.
Villi, intestinal, their structure in man and certain of the mammalia, by John Goodsir, Esq., 165.

Warington, R., Esq., on a re-arrangement of the molecules of a body after solidification, 292.

PRINTED BY NEILL AND CO., EDINBURGH.

ART. I. On the most recent Disturbance of the Crust of the Earth, in respect to its suggesting an Hypothesis to account for the Origin of Glaciers. By Sir G. S. MACKENZIE, Bart., F.R.S. L. & Ed., &c. Read before the Royal Society of Edinburgh on the 7th March 1842. Communicated by the Author, . 1

II. On the cause of the Diminution of the fall of Rain as the height above the ground increases. By JAMES DALMAHOY, Esq. Communicated by the Author, ... 10

III. Observations on the Defects of Rain-Gauges, with description of one of an improved form. By THOMAS STEVENSON, Civil Engineer. Communicated by the Royal Scottish Society of Arts, 12

IV. Microscopical Researches on the Conformity of Structure and Growth in Animals and Plants. By M. SCHWANN, ... 21

V. On the Comparative Evaporative Power of Coal and of Coke. By ANDREW FYFE, M.D., F.R.S.E., F.R.S.S.A. Communicated by the Royal Scottish Society of Arts, ... 31

VI. On some Geological and Physical Considerations connected with certain portions of the Glacier Theory of M. Agassiz. By Professor H. G. BRONN of Heidelberg, ... 36

XUM

VII. On the Prevention of Smoke and Economy of Fuel by the use of Steam, in the Patent Process of Ivison. By ANDREW FYFE, M.D., F.R.S.E., F.R.S.S.A. Communicated by the Royal Scottish Society of Arts, ... 51

VIII. On producing the effect of Fog in a Portable Diorama, constructed by GEORGE TAIT, Esq. Advocate. Communicated by the Royal Scottish Society of Arts, ... 64

IX. On British Fossil Reptiles. By Professor OWEN, 65

X. On the Influence of Mountains on Temperature in the Winter in certain parts of the Northern Hemisphere. By Mr HOPKINS, ... 88

XI. Report on the Bude Light. By ANDREW URE, M.D., F.R.S., ... 91

XII. Remarks on the Climate of Egypt. By M. JOSEPH RUSSEGGER, Austrian Councillor of Mines, . 93

XIII. Essay on the Glaciers and the Erratic Formation of the Basin of the Rhone. By JEAN DE CHARPENTIER, ... 104

XIV. On the Glacial Theory. By RODERICK IMPEY MURCHISON, Esq., President of the Geological Society, &c., ... 124

XV. Description and Uses of his Protracting Table. By GEORGE BUCHANAN, Esq., F.R.S.E., F.R.S.S.A., Civil Engineer, Edinburgh, with a Plate. Communicated by the Royal Scottish Society of Arts, 140

XVI. General View of the Geological Structure of the Alps. By M. STUDER of Berne. (With a Section), ... 144

Physiognomy of the Surface, ... 144
Mica-slate, Gneiss, Granite, &c., ... 146
Flysch, &c., ... 147
Limestone and Slate, ... 149
Mixed Formation, ... 152
Limestone of the High Alps and Black-Slate, . . 152
Chalk Series, ... 153
Alpine Macigno, ... 154
Seeven Limestone, ... 155

Glauconite, ... 155
Neocomian Formation, ... 156
Tertiary Formations, ... 156
Molasse, ... 159
Nagelflue, ... 159
Diluvium and Erratic Blocks, ... 161
General Conclusions, ... 162

XVII. On the structure of the Intestinal Villi in Man and certain of the Mammalia, with some observations on Digestion, and the Absorption of Chyle. By JOHN GOODSIR, Esq., M.W.S., Surgeon, and Conservator of the Museum of the Royal College of Surgeons, Edinburgh. Communicated by the Author, ... 165

XVIII. On a New Genus, and on Six New Species of Crustacea, with Observations on the development of the Egg, and on the metamorphoses of Caligus, Carcinus, and Pagurus. By HENRY D. S. GOODSIR, Esq., Surgeon, Anstruther. Communicated by the Author. 174

SECT. I.—On a New Genus, with descriptions of Three New Species of Stomapoda, ... 174
SECT. II.—On the development of the Ova, and on the metamorphoses of Caligus, ... 178
SECT. III.—On Zoe—The development of the Ovum, and the metamorphoses of Carcinus Mænas, and Pagurus Bernhardus, ... 181
SECT. IV.—On the Structure and Habits of the Caprellæ: with descriptions of some new Species, . . . 183

XIX. Additional Observations on Fibre, contained in a Memoir lately read to the Royal Society of London. By MARTIN BARRY, M.D., F.R.S., Lond. and Ed., ... 192

XX. Lord Gray's Meteorological Table for 1841, . 195

XXI. Proceedings of the Royal Society of Edinburgh. Continued from vol. xxxi. p. 401, . . . 196

XXII. Proceedings of the Wernerian Natural History Society. Continued from vol. xxxii. p. 400, . 197

XXIII. Proceedings of the Royal Scottish Society of Arts, ... 199

XXIV. Scientific Intelligence—

GEOLOGY AND MINERALOGY.

1. On Fan-Shaped Stratification, ... 200
2. Geognostical position of the numerous masses of native Copper in North America, ... 201
3. The Great Crater of the Volcano in Hawaii, . . 202
4. Jamesonite, ... 203
5. Crystallized Gold, ... 203
6. On the Composition of the Asbestus of Scharzenstein in the Ziller Thal in the Tyrol, ... 203
7. Geokronite, ... 204
8. Meeting of the Geological Society of France at Aix, . 204
9. Sounding Sands, ... 204
10. Fossil Foraminifera in the Green Sand of New Jersey, (America), ... 205

ZOOLOGY.

11. Notice of a Memoir on the Organic Tissues in the bony structure of Corallidæ, lately read before the Royal Society. By J. S. Bowerbank, Esq., F.G.S., . . 206
12. Silk Worms, ... 207
13. Snail Trade of Ulm, ... 207
14. Notice of a Memoir lately read before the Royal Society on the ultimate Distribution of the Air-Passages, and of the Modes of Formation of the Air-Cells of the Lungs. By William Addison, F.L.S., Surgeon, Great Malvern, ... 207
15. Loss and Recovery of Mr Swainson's Library, . . 208

ARTS, &c.

16. Speed of Travelling, ... 208
17. Improvement in Paving Streets, ... 208
18. Eastern Method of Measuring Time, ... 209

XXV. New Publications, ... 210

XXVI. List of Patents granted for Scotland from 28th December 1841 to 16th March 1842, . . 211

XXVII. List of Patents granted for Scotland from 16th March 1842 to 23d June 1842, . . . 214

CONTENTS.

ART. I. The Glacial Theory and its recent progress. By LOUIS AGASSIZ, Doctor of Philosophy and Medicine; LL.D. of Edinburgh and Dublin; Knight of the Order of the Red Eagle of Prussia; Professor of Natural History in the Academy of Neuchâtel. Communicated by the Author. With a Plate, 217

I. The Erratic Phenomenon—
1. The phenomena proper to the interior of valleys, 221
2. The Dispersion of Erratic Blocks in Plains, at great distances from their Origin, . . . 226
3. Parallel Terraces, ... 236
II. Researches on Existing Glaciers, . . . 240
Mode of Living on the Glacier, . . . 278

II. On the Occurrence of Platina and Diamonds in Borneo, ... 284

III. On some Peculiar Changes in the Internal Structure of Iron, independent of, and subsequent to, the several processes of its manufacture. By CHARLES HOOD, Esq., F.R.A.S., &c. 286

IV. On a Re-arrangement of the Molecules of a body after solidification. By ROBERT WARINGTON, Esq. 292

V. On a new method of Illuminating Church Clocks. By Mr R. BRYSON, Edinburgh. Communicated by the Royal Scottish Society of Arts, . . 293

VI. On the Mechanical Arts of Persia. By JAMES ROBERTSON, Esq., Civil and Mining Engineer, Edinburgh, late in the service of the Shah of Persia. Communicated by the Royal Scottish Society of Arts. With a Plate, ... 296

Page

VII. On Nebulæ. By M. Arago, . . . 307
Definitions, ... 307
Nature of Nebulæ, ... 308
Historical Sketch of the Discovery of Nebulæ, . . 310
Resolvable Nebulæ.
Their Form, ... 311
Circular Nebulæ, ... 311
Number of Stars contained in certain Globular Nebulæ, 313
Perforated or Annular Nebulæ, . . . 313
Nebulæ are not uniformly disseminated through all the regions of the Heavens, ... 314
Nebulæ considered in their relations to the surrounding spaces, ... 314
The spaces poorest in Stars are near the richest Nebulæ, 314
Nebulous Matter.
The Diffused Matter occupies very extensive spaces in the Heavens, ... 315
The great Luminous spots have no regular form, . 315
Of the Light of True Nebulæ, ... 316
Distribution of the Phosphorescent Matter in True Nebulæ, 317
Historical details on the Transformation of Nebulæ into Stars, ... 319
Of the Condensation the Diffused Matter must undergo in order to be transformed into Stars, . . . 321
Comparative intensities of the total Light of a Nebula, and the Condensed Light of a Star, . . . 321
Changes Observed in certain Nebulæ, . . . 322
Planetary Nebulæ, ... 323
Diffused Cosmic Matter, not luminous of itself, and imperfectly diaphanous, ... 325
Milky Way.
Opinions of the Ancients on the Milky Way. . . 326
Opinions of the Moderns, ... 328
Herschel's labours on the Milky Way, . . . 330
Will the Milky Way endure for ever in the form in which we now see it? 334

VIII. Some Remarks on the Ancient Peruvians. By Samuel George Morton, M.D., . . . 335

IX. Professor Forbes' Account of his Recent Observations on Glaciers. Communicated in Letters to the Editor, ... 338

X. Notes on the Effects produced by the Ancient Glaciers of Caernarvonshire, and on the Boulders transported by Floating Ice. By Charles Darwin, Esq., M.A., F.R.S., and F.G.S., . . 352

Page

XI. Descriptions of some New Crustaceous Animals found in the Firth of Forth. By Henry Goodsir, Esq., Surgeon, Anstruther. Communicated by the Author. With a Plate, . . . 363

Section I. On the Genus Munna, . . . 363
Section II. On the Genus Evadne, . . 366
Section III. On a new Genus of Pycnogonidæ, . 367

XII. Extracts from Professor Valentin's Report on the Progress of Embryology in the year 1840, 368

XIII. Notices of Earthquake-Shocks felt in Great Britain, and especially in Scotland, with inferences suggested by these Notices as to the Causes of the Shocks. By David Milne, Esq., F.R.S.E., M.W.S., F.G.S, &c. Communicated by the Author. Continued from volume xxxii., p. 378, . . . 372

II. Accounts from more distant parts of the Country.
1. Accounts from districts west of Comrie, . 372
2. Accounts from districts north-west of Comrie, 375
3. Accounts from districts to the north of Comrie, 375
4. Accounts from districts north-east of Comrie, 383

XIV. On the Succession and Development of Organised Beings at the Surface of the Terrestrial Globe; being a Discourse delivered at the Inauguration of the Academy of Neuchâtel. By Professor Louis Agassiz, ... 388

XV. Account of Observations recently made on the Glacier of the Aar. By Professor Louis Agassiz, 399

XVI. Proceedings of the Royal Scottish Society of Arts, 403

XVII. List of Patents granted for Scotland from 29th June to 20th September 1842, . . . 414

XVIII. Index, ... 417
